

The signal that an employer is about to switch benefits brokers is sitting in public filings — fragmented, ugly, and ignored. **Renata is the agent** that fuses it into one **In-Play Score** and writes the outreach — so the broker's only job is the one thing that closes: **the right human touch, at the perfect time.**

The positioning: Renata is both the brand and the agent — and the agent is the service. Not a database the broker searches; a service that finds the moment, scores it, and drafts the opening, leaving the human to do what only humans do well.

THE MARKET, BY THE NUMBERS

100,000+

US benefits brokers & agencies — the buyers

\$60–120K

annual commission on a single mid-market group (3–6% of a ~\$2M plan)

5–10 yrs

a won account stays — \$300K–\$1M+ in lifetime commission

~\$70B

US benefits-brokerage commission pool by 2032 (from ~\$35B in 2022)

Production is top-heavy: a minority of top-performing brokers write most of the new business, and each new mid-market group is worth tens of thousands a year for years. The whole game is finding the few accounts that are actually in play — which today is done blind.

THE VALUE MATH — WHY 1% IS MORE THAN FAIR

Our TAM is **~1% of the commission pool our customers chase**. We don't need to take value from this market — we need to **unlock** it.

COMMISSION POOL

~\$70B

OUR TAM (~1%)

~\$360M

VALUE WE MUST CREATE

~\$3.6B+

To justify capturing ~1% in software fees, we deliver roughly **10× that in value** to brokers — about \$3.6B in commissions they'd otherwise leave on the table. That's only a **~5% lift** on a pool this size. Given that brokers prospect blind today, a 5% improvement in finding and timing in-play accounts is conservative — making 1% capture an easy trade for the market.

WHY NOW — THE AI WINDOW

This data has always been public. What changed is the **cost of using it**. Cleaning messy filings, fusing a dozen fragmented sources, and writing tailored outreach used to require an enterprise data team — which is exactly why only a few incumbents could do it, and only at enterprise prices. AI collapsed that cost to near zero.

- **AI does the unglamorous work** — normalizing dirty 5500 data, reconciling sources, drafting per-account outreach — at the marginal cost of a model call.
- **A small AI-native team ships what took an enterprise.** The working data spine, scoring, and Radar already exist, built in weeks, not years.
- **Speed is the moat-for-now.** The window is the gap between "AI makes this cheap" and "incumbents retrofit AI onto legacy databases." We move first and own the indie segment they ignore.
- **Agentic, not a tool.** The leap isn't a better search box — it's an agent that finds, scores, and acts. Incumbents sell data; we sell the outcome.

WHY BENEFITS BROKERS FIRST — AND NOT THE OTHER PLAYS

Several public-data opportunities were assessed — layoff (WARN) feeds, UCC financing filings, building permits, healthcare provider data. Benefits brokers won on every axis that matters:

TEST	BENEFITS BROKERS	THE OTHERS
Buyer ROI per win	\$300K–\$1M+ lifetime	often small, one-off tickets
Buyer reachability	100K, organized (NABIP, chapters)	fragmented, hard to find
Demand validation	proven (miEdge: 8,000 users)	mostly unproven
Public-data fit	5500 Schedule A = renewal, broker, spend	thinner or single-signal
Recurring need	annual renewals → subscription	often one-and-done

Benefits is the wedge with the richest data, the clearest buyer, and validated demand. The same engine extends to the other plays later — but this is where it starts paying immediately.

MARKET SIZE

TAM

\$360M+

~100K benefits brokers ×
~\$3,600/yr blended. Expands past \$1B across all-lines brokers, carriers, MGAs & advisors the same engine serves.

SAM

\$110–145M

~30–40K independent & small-mid agencies who self-serve at our price.

SOM · 3YR

\$4–11M ARR

Texas beachhead + 1–2 niches; 1,000–3,000 brokers.

COMPETITION — VALIDATED, BUT WIDE OPEN

PLAYER	WHAT THEY DO	PRICING	THE GAP RENATA FILLS
Zywave miEdge	5500 + renewal alerts; 8,000 users, 80 of top 100 brokers	~\$18–41K+/yr suite; opaque, annual	Enterprise-priced search database; all- lines generalist
Judy Diamond / ALM	5500 data, FreeERISA, DaaS API; retirement- leaning	Quote-based packages	A data warehouse, not an agent — no fusion, no outreach
FreeERISA	Basic 5500 lookup	Free / paid Deluxe	Raw lookup; no scoring, timing, or action
State- segment data	5500 prospecting lists by state	~\$35–60/mo per state	Bare data, 12-mo lock; you do all the work
ZoomInfo / Apollo	Horizontal sales intelligence	~\$15K+/yr · ~\$49–149/seat	Not benefits-aware; no renewal or filing signal
Renata	Multi-source In-Play Score + drafted outreach + doc ingest	\$99 → \$399 flat or \$99+\$750/win	—

The wedge: incumbents prove demand but are opaque, annual-commitment, enterprise databases. Renata is the **AI-native, transparently-priced, low-commitment reimagining** — fused predictive signal, the broker's own docs ingested, the outreach written. They make you do the work; Renata does it.

TWO BROKERS, CURRENT TOOLS VS RENATA

The solo independent

1-person shop · hunts 50–150-life groups

TODAY

Priced out of miEdge. Digs through FreeERISA by hand — hours a week — then sends generic cold emails with a low hit rate. Mostly prospects blind.

WITH RENATA

A scored Radar for their metro + drafted outreach for \$99–399/mo. Surfaces 2–3 truly in-play accounts a quarter, each with the renewal, the cost gap, and the incumbent named.

One extra mid-market close = \$60K+/yr vs ~\$1–5K/yr in tool cost. ~10 hrs/week back.

The small-agency producer

3–10 producers · mid-market focus

TODAY

Pays ~\$25–41K/yr for the Zywave suite, then still researches manually and writes every email. The data is a search box; timing and outreach are on them.

WITH RENATA

Multi-source predictive timing (a carrier rate filing flags the moment), docs ingested, outreach drafted — at a fraction of the seat cost. Producers spend time on relationships, not research.

Better-timed outreach lifts win rate; prospecting spend drops; the team sells instead of searches.

GO-TO-MARKET & THE CUSTOMER JOURNEY

Where brokers come from, the path they walk, and the one wall. Connecting is free and fuels the network. The intelligence and the easy button are the subscription.

Free forever, to fuel the loop: the masked Radar, the broker directory, member badges, and connecting your network. The wall is the recommendation reveal — names, reason codes, competitive intelligence, and the drafted outreach. Outreach is always drafted and human-sent, never automated.

THE MODEL

\$99/mo entry, then the broker self-selects: **Performance** (\$99 + \$750 per closed win, billed in arrears) or **Flat** (\$399/mo, unlimited). Near-zero COGS on public data; the per-win option aligns price to value and lowers the cost of the first yes. Natural expansion to agency multi-seat and adjacent verticals.

Sources: Allied Market Research (US EB brokerage \$34.7B→\$70.1B, 7.5% CAGR); NABIP (100K+ members, 200+ chapters); Hotaling / Sima / Nava (broker commission economics, 3–6% of premium, \$60–120K on \$2M, \$25–40 PEPM); Zywave pricing per public user reports (\$18–41K+/yr); Rough Notes (state-segment 5500 data \$35–60/mo); bottom-up modeling. Figures are estimates for internal planning, not projections of results.

Renata · the agent finds the moment and writes the opening; you bring the human touch.
